Subject Index

Volume 6, 1984

Acid phosphatase, reaction product in aminoglycoside-antibiotic-treated kidney, automated measurement, 279
Acquired immune deficiency syndrome (AIDS), chromatin pattern and DNA analysis, 293
Acridine orange, use in FCM RNA and DNA analysis of isolated nuclei from bladder irrigation specimens, 24
Algorithm, DNA cytophotometric DNA diagnosis and grading of malignancy, 1
Aminoglycoside antibiotics, acid phosphatase reaction product in treated kidneys, automated measurement, 279
Aneuploidy (*see also* ploidy analysis)
  Breast cancer, image and FCM analysis, 9
  DNA diagnosis and grading of malignancy, 1
Automated cytodiagnostic systems, specifications proposed by IAC, 146
Automated cytopathology, diagnosis of bronchial carcinoma in cytocentrifuged bronchial brushing specimens, 30

Binary hierarchic classifier, stabilized, in cytopathologic diagnosis, 247
Bladder, irrigation specimen, FCM RNA and DNA analysis, 24
Bone marrow, granulocytic cell lineage of, quantitative analysis, 168
Book reviews
  History of Staining, 144
  A Manual of Morphometry in Diagnostic Pathology, 144
Breast
  Cancer, image and FCM analysis of DNA content, 9
  Neoplasms, Feulgen DNA cytophotometry in histologic sections, 19
  Tumors, quantitative analysis of heterogeneity of estrogen binding, 284
Bronchial brushing, cytocentrifuged, for automated cytopathologic diagnosis of bronchial carcinoma, 30

Cancer
  Breast, image and FCM analysis of DNA content, 9
  Lung, FCM analysis correlated with histologic stage and type, 99
Cancer screening, cervical, malignant cell detection in, 121
Carcinoma
  Bronchial, automated cytopathologic diagnosis in cytocentrifuged bronchial brushing specimens, 30
  Bronchogenic, quantitative DNA values, 95
  Prostatic, quantification and validation of diagnostic cytologic criteria, 74
Caspersson, Torbjörn Oscar, 71
Cell detection, malignant, and cervical screening, 121
Cell image analysis, high resolution
  Bone marrow granulocytic cells, use of SAMBA 200 system, 168
  Computer-assisted, binary tree classifier for, 247
  Discrimination between normal and malignant gastric epithelial cells, 206
  DNA cytophotometric diagnosis and grading of malignancy, 1
  Modified TICAS system for, 59
  Multispectral images, scene-segmentation method for, 210
  Precision cell location and relocation techniques, 139
  Simulation model for gynecologic specimen classification, 262
Cell scanning, use of polyelectrolytes in preparation of cell monolayers for, 272
Cells
  Benign and malignant mesothelial: number, size and distribution of lipid vacuoles in, 221
  Computer-assisted identification system, 59
  Cultured pleural fluid, identification by direct immunofluorescence, 238
  Feulgen-stained, features independent of stain intensity, 105
  Gastric epithelial, discrimination between benign and malignant by cell image analysis, 206
  Granulocytic bone marrow, quantitative analysis of lineage, 168
  Intermediate cervical, expression of malignancy markers in, 243
  Location and relocation techniques, application in cell image analysis, 139
  "Moderate dysplastic" in CIN, cytomorphologic differences, 189
  Multispectral images of, scene-segmentation method, 210
  Synoviocytic and monocytic in synovial fluid: morphologic, quantitative and cytoenzymologic studies, 227
  Transfer from polycarbonate filters to glass slides, pressure-fixation method, 131
  Urothelial
    HPV-infected, image analysis and DNA content, 89
    Intraobserver and interobserver diagnostic differences compared with computer classification, 112

0190-0471/84/0604-0296/$02.00/0 © The International Academy of Cytology

Cervical cytology, automated prescreening system, simulation model for gynecologic specimen classification, 262
Cervical intraepithelial neoplasia, "moderate dysplasia" cells from, cytomorphologic differences among, 189
Cervix
  Cancer screening, malignant cell detection in, 121
  Epithelial lesions, cytomorphologic and cytochemical analysis in differential diagnosis, 196
  Intermediate cells, expression of malignancy markers in, 243
  Intraepithelial neoplasia, cytomorphologic differences among individual "moderate dysplasia" cells, 189
  Smears, immunocytochemical staining for diagnosis of CIN, 201
Chromatin, pattern in cells from AIDS patients, 293
Computer-assisted cell identification system, 59
Computer classification, urothelial cells, compared with intraobserver and interobserver diagnostic differences, 112
Computerized histopathologic assessment of malignant potential (CHAMP), malignant melanoma, 37
Criteria, cytology of prostatic carcinoma, quantification and validation, 74
Cytocentrifugation, bronchial brushing specimens, for automated cytopathologic diagnosis of bronchial carcinoma, 30
Cytochemistry, use in differential diagnosis of cervical epithelial lesions, 196
Cytoenzymology, synoviocytic and monocytic cells in synovial fluid, 227
Cytology, prostatic carcinoma, quantification and validation of diagnostic criteria, 74
Cytology slides, transfer of cells from polycarbonate filters by pressure-fixation method, 131
Cytometry
  DNA image, indicating viral infection in AIDS, 293
  Rapid diagnostic DNA, TV-based image-analysis system for, 179
Cytomorphology, use in differential diagnosis of epithelial lesions, 196
Cytomorphometry, "moderate dysplasia" cells from CIN, differences, 189
Cytopathologic diagnosis, use of stabilized binary hierarchic classifier, 247
Cytopathology, diagnostic, use of cationic polyelectrolytes in preparation of cell monolayers, 272
Cytophotometry
  DNA, algorithm for diagnosis and grading of malignancy, 1
  Feulgen DNA, histologic sections of mammary neoplasms, 19
Cytopreparation
  Cytocentrifugation of bronchial brushing specimens, use in automated cytopathologic diagnosis of bronchial carcinoma, 30
  Monolayers for automated cell scanning and diagnostic cytopathology, use of cationic polyelectrolytes in preparation, 272
  Pressure-fixation method of transferring cells from polycarbonate filters to glass slides, 131

Diagnostic performance
  Cervical cells, relation to cervical cancer screening, 121
  Urothelial cells, intraobserver and interobserver compared with computer classification, 112
Differential diagnosis, cervical epithelial lesions, cytomorphologic and cytochemical analysis, 196
DNA analysis
  Breast cancer, image cytometry versus FCM, 9
  Bronchogenic carcinoma, 95
  Cells from AIDS patients, 293
  Cervical epithelial lesions, use in differential diagnosis, 196
  Cytophotometric determination, algorithm for diagnosis and grading of malignancy, 1
  FCM
    Isolated nuclei from bladder irrigation specimens, 24
    Lung cancer, correlation with histologic stage and type, 99
  Features independent of stain intensity for evaluation of Feulgen-stained cells, 105
  Feulgen, histologic sections of mammary neoplasms, 19
  HPV-infected urothelial cells, 89
  TV-based system for rapid diagnostic cytometry, 179
Dysplasia, cells of moderate, cytomorphologic differences among, 189

Epithelial membrane antigen (EMA), marker for CIN in cervical smears, immunocytochemical staining, 201
Error measures, use in scene-segmentation algorithm development, 45
Estrogen binding, breast tumor specimens, quantitative analysis of heterogeneity, 284
Estrogen receptor content, breast cancer, comparison of image and FCM DNA analysis, 9
Eye, melanoma, computerized histopathologic assessment of malignant potential, 37

FAZYTAN prescreening system, simulation model for gynecologic specimen classification, 262
Feature selection, error measure, in scene-segmentation algorithm development, 45
Feulgen stain, DNA cytophotometry, histologic section mammary neoplasms, 19
Filters, polycarbonate, transfer of cells from polycarbonate filters to glass slides with pressure-fixation technique, 131

Flow cytometry (FCM)
Analysis of RNA and DNA content of isolated nuclei from bladder irrigation specimens, 24
DNA content in breast cancer, comparison with image analysis, 9
Lung cancer, correlation with histologic stage and type, 99

Gynecologic specimen, simulation model for classification in high-resolution prescreening system, 262

Hierarchic classifier, stabilized binary, in cytopathologic diagnosis, 247
Histologic sections, mammary neoplasms, Feulgen DNA cytophotometry, 19
Human polyoma virus (HPV), infected urothelial cells, image analysis and DNA content, 89

Image analysis (*see also* cell image analysis), high resolution
DNA content in breast cancer, comparison with FCM analysis, 9
HPV-infected urothelial cells, 89
Measurement of acid phosphatase reaction product in aminoglycoside antibody treated kidney, 279
TV-based system for, use in rapid diagnostic DNA cytometry, 179
Immunocytochemistry, staining, for diagnosis of CIN, 201
Immunofluorescence, direct, identification of cultured pleural effusion cells, 238
International Academy of Cytology (IAC), proposed specifications for automated cytodiagnostic systems, 146
Isolation, nuclei from bladder washing specimens, FCM RNA and DNA analysis, 24

Kidney, aminoglycoside-antibiotic-treated, automated measurement of acid phosphatase reaction product, 281

Lesions, cervical epithelial, cytomorphologic and cytochemical analysis in differential diagnosis, 196
Lipid vacuoles, analysis of number, size and distribution patterns in benign and malignant mesothelial cells, 221
Lung
Cancer, FCM analysis correlated with histologic stage and type, 99
Carcinoma, automated cytopathologic diagnosis on cytocentrifuged bronchial brushing specimens, 30
Lymph node, involvement in breast cancer, related to image and FCM DNA analysis, 9

Malignancy
Cell markers for, expression in intermediate cervical cells, 243
Diagnosis and grading, algorithm for DNA cytophotometric, 1
Malignant potential, computerized histopathologic assessment, uveal melanoma, 37
Marker analysis for malignancy, intermediate cervical cells, 243
Marker studies, EMA in CIN smears, 201
Mathematical simulation, model for gynecologic specimen classification in high-resolution prescreening system, 262
Maturation, human bone marrow granulocytic cells, quantitative anaysis, 168
Megakaryopoiesis, in chronic myeloproliferative diseases, morphometric evaluation, 155
Melanoma
Malignant cutaneous, evaluation of prognostic characteristics of stage I, 147
Uveal, computerized histopathologic assessment of malignant potential, 37
Mesothelium, benign and malignant cells, analysis of number, size and distribution patterns of lipid vacuoles, 221
Monolayers, for automated cell scanning and diagnostic cytopathology, use of cationic polyelectrolytes in preparation, 272
Morphology, synoviocytic and monocytic cells in synovial fluid, 227
Morphometry, evaluation of megakaryopoiesis in chronic myeloproliferative diseases, 155
Myeloproliferative diseases, morphometric evaluation of megakaryopoiesis, 155

Neoplasia, cervical intraepithelial
Cytomorphometric differences among individual "moderate dysplasia" cells, 189
Diagnosis by immunocytochemical staining of cervical smears, 201
Neoplasms, breast, Feulgen DNA cytophotometry in histologic sections, 19
Nuclei, isolated from bladder irrigation specimens, FCM RNA and DNA analysis, 24
Nucleolar area, computerized histopathologic assessment in uveal melanoma, 37

Pleural fluid, cultured cells of, identification by direct immunofluorescence, 238
Ploidy analysis
Breast cancer, image and FCM, 9
DNA cytophotometric diagnosis and grading of malignancy, 1
FCM
Isolated nuclei from bladder irrigation specimens, 24
Lung cancer, correlated with histologic type and stage, 99
HPV-infected urothelial cells, 89
TV-based system for rapid diagnostic cytometry, 179
Polyelectrolytes, cationic, use in preparation of cell monolayers for automated cell scanning and diagnostic cytopathology, 272
Poly-L-lysine, analysis of use in preparation of cell monolayers for automated cell scanning

and diagnostic cytopathology, 272
Prescreening system, high-resolution, simulation model for gynecologic specimen classification, 262
Prognosis
Cutaneous malignant melanoma, evaluation of characteristics for stage I, 147
DNA cytophotometric, 1
Uveal melanoma, computerized histopathologic assessment, 37
Prostate, carcinoma, quantification and validation of diagnostic cytologic criteria, 74

Quantification, diagnostic cytologic criteria for prostatic carcinoma, 74
Quantitative analysis
Lipid vacuoles in benign and malignant mesothelial cells, 221
Synoviocytic and monocytic cells in synovial fluid, 227

Receiver operating characteristic (ROC), for cervical slide screening, 121
RNA analysis, isolated nuclei from bladder irrigation specimens, 24

SAMBA 200 cell image processor, use in quantitative analysis granulocytic cell lineage of human bone marrow, 168
Scene segmentation
Algorithm development using error measures, 45
Method for multispectral images, 210
Skin, malignant melanoma, evaluation of prognostic characteristics for stage I, 147
Slide screening, human
Cervical cancer, malignant cell detection,m 121
Urothelial cells, intraobserver and interobserver differences compared with computer analysis, 112
Smears, cervical, immunocytochemical staining for diagnosis of CIN, 201
Specimen classification, gynecologic, simulation model for use in high-resolution prescreening system, 262
Stain
Feulgen, features independent of stain intensity for DNA analysis, 105
Immunocytochemical, cervical smears for diagnosis of CIN, 201
Standard deviation, nonsymmetric, in quantitative DNA analysis of bronchogenic carcinoma, 95
Stomach, normal and malignant epithelial cells, cell image analysis discrimination, 206
Synovial fluid, synoviocytic and monocytic cells in: morphologic, quantitative and cytoenzymologic studies, 227

TAS plus, Leitz, use for rapid diagnostic DNA cytometry, 179
Television-based image analysis system, use for rapid diagnostic DNA cytometry, 179
Thrombocythemia, primary, morphometric evaluation of megakaryopoiesis in, 155
TICAS system
Modifications for computer-assisted cell identification system, 59
Use in study of intermediate cell markers for malignancy, 243
Tissue sections
Cutaneous malignant melanoma, evaluation of prognostic characteristics for stage I, 147
Mammary neoplasms, Feulgen DNA cytophotometry, 19
Tree classifier, binary, for computer-assisted cell image analysis, 247
Tumors, breast, quantitative analysis of heterogeneity of estrogen binding, 284

Urinary sediment, HPV-infected urothelial cells in, image analysis and DNA content, 89
Urothelium
Cell diagnosis, intraobserver and interobserver differences compared with computer classification, 112
HPV-infected cells, image analysis and DNA content, 89

Vacuoles, lipid, analysis of number, size and distribution patterns in benign and malignant mesothelial cells, 221
Validation, diagnostic criteria for prostatic carcinoma, 74
Viral infection, cells from AIDS patients, indicated by DNA image cytometry, 293

Zonax, Zeiss, use in precision cell location and relocation for cell image analysis, 139
